An Easy Way to create an Unbreakable Password :
The Passphrase Trick

Hey, Cyber-Heroes!
Do you think "123456" or your cat's name makes a good password? Bad news—that wouldn't stand a chance against a hacker!

Here's a foolproof way to **create super-secure passwords**: the passphrase method.

What's a Passphrase?
A passphrase is a full sentence turned into a password.
Its longer (which makes it safer) and much easier to remember!

3 Steps to a Ninja-Level Passphrase:

1 Choose a sentence you love:
It could be a movie quote, song lyrics, or even a random phrase you make up:

- "I love eating pizza at 3 AM"
- "Winter is coming" for TV fans
- "Big fan of One Piece" for manga lovers

2 Turn it into a secret code
Keep the key words but mix things up—add numbers, symbols, or swap letters for special characters:

- "ILovePizza@3AM!"
- "W1nterIsC0ming?"
- "B1gF@n21Piece"

3 Personalize it even more:
Add a lucky number or something related to your interests:

- "SoccerILovePizza@3AM!"
- "W1nterIsC0ming?42"
- "B1gF@n21Piece2024"

What NOT to do

Use your pet's name
(Sorry, Rex!)

Set your password as
"password," "123456,"
or "qwerty"

Use your birthdate
(even your crush's wont work!)

Challenge: Test Your Friends!

Create a fun passphrase and challenge your friends to guess the original phrase or quote!

You'll get a good laugh while staying safe online.
